| <p>Whāinga Ako</p> <p><i>Learning Outcomes</i></p> | <ul style="list-style-type: none"> • Show fractions on a number-line. |
| <p>Reo Matatini Pāngarau</p> <p><i>Mathematical Language</i></p> | <p>Whole, half, halves, quarters, fourths, thirds, sixths, eighths, counting numbers, mixed numbers.</p> |
| <p>Tohatoha Whakaaro/Wā Hononga</p> <p><i>Sharing back/ Connect</i></p> | <p>Select students to share who are able to show in multiple ways equal parts which represent a range of different fractional numbers on the large number-line and then students who can visualise and draw number-lines and mark the positions of fractions between 0 and 1 and 1 and 2.</p> <p>Connect: What mathematical statements using mixed numbers can you make using the number-line for numbers between 3 and 4? Use the equals sign (=) or greater than or less than (> and <) signs. I will give you an example to start: $3\frac{1}{2}$ is less than $3\frac{3}{4}$ [record as $3\frac{1}{2} < 3\frac{3}{4}$].</p> |
| <p>Kōrero Tautoko</p> <p><i>Teacher Notes</i></p> | <ul style="list-style-type: none"> • During the launch ask the students whether there are numbers between whole numbers? Lead into a discussion of situations where they have met a half (e.g., a baby before they are one, halfway between their own birthdays, half hour on a clock, half an apple). Extend discussion to other situations using other fractions. • Have an unmarked number line on the whiteboard to use during the lesson. Use this during the launch to estimate where the fraction is that they describe. • Have an unmarked length of paper tape across the floor and large marked fraction cards with whole number words and fraction words and symbols. • Facilitate the students to notice that earlier in the year, the number lines they have used only contained whole numbers (numbers that resulted from counting). The fractions they are talking about now (numbers resulting from equal splitting or partitioning) can be represented on the number line. This shows that fractions may also be thought of as numbers. In the connection, refer to the fractions (e.g., $3\frac{1}{2}$) as mixed numbers. • Monitor for students using vocabulary which emphasises dividing or splitting equally or portioning into equal parts. • Notice students who find the concept of fractions as numbers between numbers counter intuitive. Allow them to struggle and construct reasoning through mathematical talk and using agreeing mathematically and |
